

WHAT'S IN THE BOX:

4-WAY SPLITTER	6 LED STRIPS
3-WAY SPLITTER	(2) LEGS
REMOTE/RECEIVER	(1) HEAD
BATTERY BOX	(2) ARMS
CABLE TIE	(1) TORSO
(5) SILICONE RINGS	

Start by ordering the LED strips by size. The 2 longest strips are the legs. The next size down is the head piece which you will form into a circle later. The next size down is the 2 arm pieces. Finally, the shortest piece is the torso.

Take the battery box and plug it into the remote receiver. Then plug the 4 way splitter into the remote receiver. Plug the 2 legs, torso and 3-way splitter into any of the 4 plugs. The 3-way splitter cable will be directly beneath the torso LED strip. The legs should face the opposite direction of the torso and 3-way splitter.

Take the head piece and form a circle, slightly overlapping the 2 ends. Secure the 2 ends together with a cable tie.

Plug the head and 2 arms into the 3-way splitter. You have now formed the stick figure. At this time it is a good idea to power up the suit and make sure all LEDs are in working order. If there are any issues, discontinue use and contact Glowly Zoey.

At this time you can decide if you need to shorten the LED strip lengths based on the body size it will be used on. You can simply folder over the strips to make loops for the hands and feet if you wish. The torso can be folded over as well at the top.

For a cleaner look, you can cut the LED strips at any of the 4 copper ovals (make sure you've disconnected the power at this time). Only cut across the copper ovals, anywhere else will damage the strip. Be sure to cut at the END of the strip opposite the connector. End caps have been provided to seal the end of the strips. It is recommended that you add a dab of silicone sealant (not included) to secure the caps.

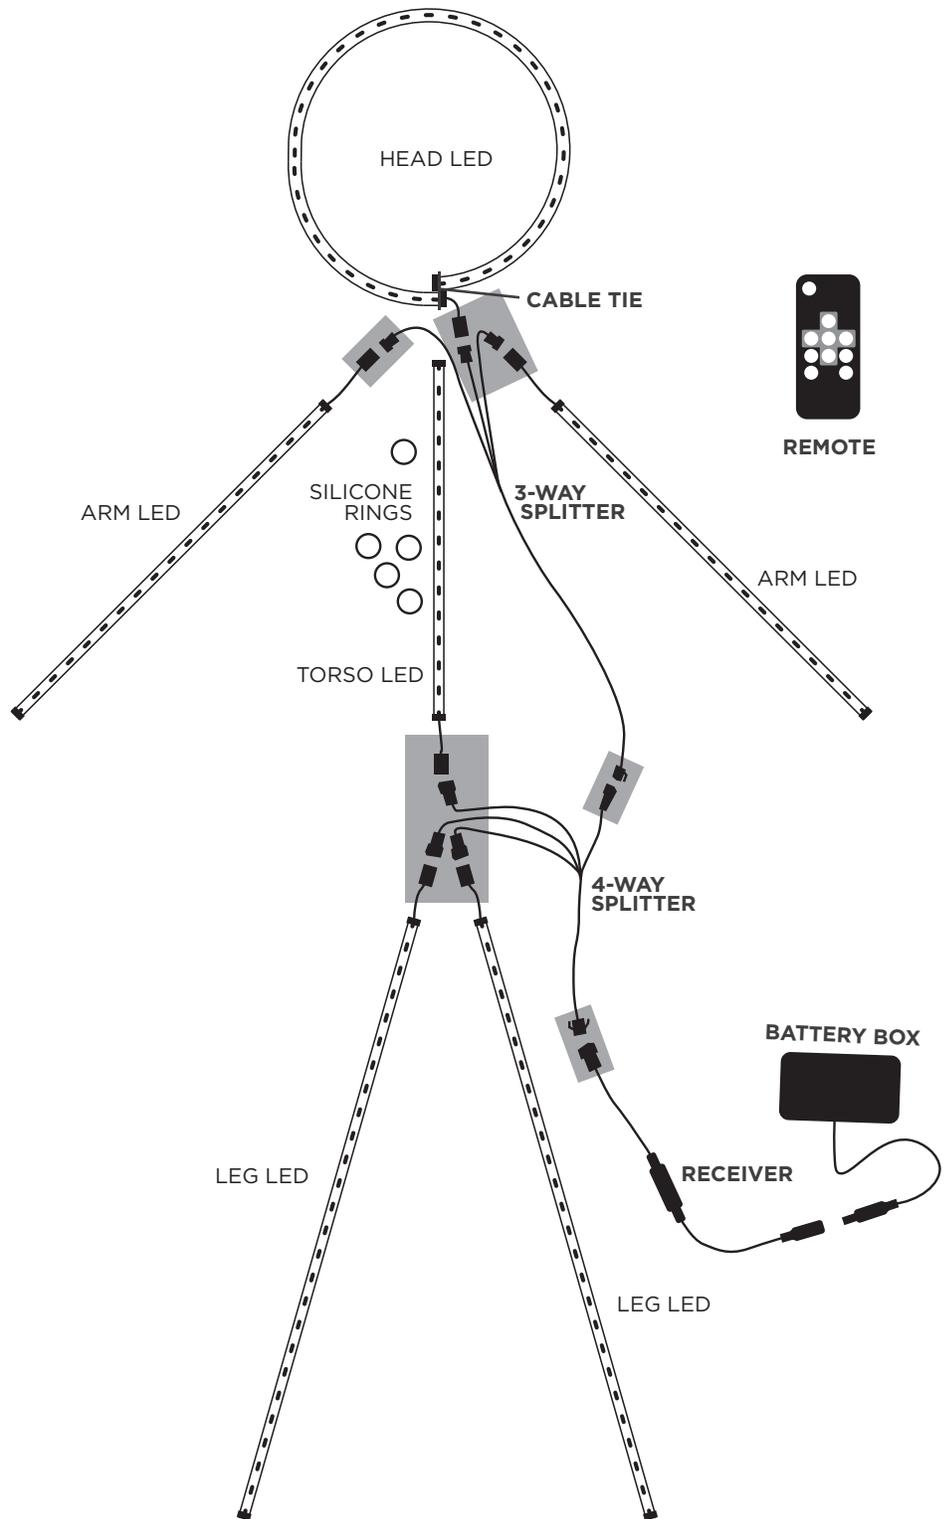

ATTACHING TO CLOTHING

You are now ready to attach to your clothing. The easiest method is safety pins. The safety pins hold the lights in place while allowing movement as well. Do not pierce through the LED strip, you just want to hold it between your clothing and the safety pin.

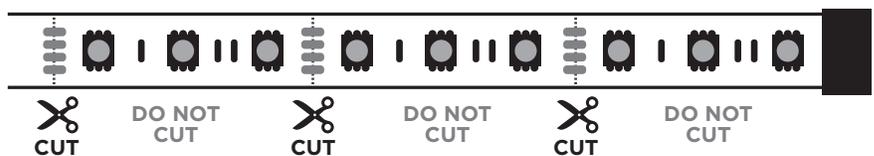

Another method is using Velcro. You can glue Velcro to your clothing and use the other part to hold the LEDs in place.

If you sew the lights onto your clothing, be sure to allow for some movement of the LED strips. Pay particular attention to the knee area as there is a lot of bending there.

If you have any questions, please email support@glowlyzoey.com

ONLY CUT ACROSS THE COPPER OVALS, ANYWHERE ELSE WILL DAMAGE THE STRIP

IMPORTANT: No returns or exchanges can be made after LED strips have been cut.
